🐙 ezzabuzaid

Summary

Self-taught builder with over 9 years shipping production software. Created multiple open-source frameworks from scratch including DeepAgents (agent orchestration), SDK-IT (SDK generation), and Serverize (container platform). Track record of rapidly turning ideas into working systems - from parsers and compilers to RAG pipelines and multi-agent architectures.

Projects

DeepAgents

July 2025 – present

TypeScript-native AI agent framework designed to be batteries-included

- Implements agent handoffs inspired by OpenAI Swarm for orchestrating multi-agent systems
- Context engine for token estimation, compaction strategies, and structured system prompts
- Includes retrieval package with sqlite-vec for vector search and multi-source connectors (GitHub, RSS, files)

Proposal Generator Agent

Jan 2024

Agentic workflow for business proposal drafting

- Human-in-the-loop design where users select context, AI drafts, users comment, AI refines
- Multi-turn agent with iterative feedback loops
- Harvests user-provided files to learn tone, design, and style

Text2SQL Agent

Oct 2025

AI agent that converts natural language queries to SQL

- Converts natural language to valid SQLite queries with parser validation
- Supports drawing various charts from query results
- Creates domain-specific agents through table/view filtering

SDK-IT

Jan 2024 – present

Developer tool for SDK generation and OpenAPI automation

- Generates type-safe SDKs from OpenAPI specs and OpenAPI specs from TypeScript code
- First-party React Query integration for frontend data fetching
- Isomorphic design enables backend integration testing

Serverize

Jan 2024 – present

Self-hosted container platform for development deployments

- Auto-generates Dockerfiles by analyzing codebase configuration
- Supports 7+ frameworks including Next.js, Nuxt, Astro, and FastAPI
- Secure secrets management with encrypted environment variables

Experience

AI Engineer, Phi Science Institute – Amman, Jordan

May 2024 – present

Transforming AI and deep-tech education across the Arab region; precision-education platform for young researchers

Senior Software Engineer, Limerence – Amman, Jordan

Oct 2021 – May 2024

Natural-language interface to databases — connects to Postgres, MySQL, and BigQuery and have business questions answered in plain language with the SQL behind every answer

- Utilized TypeScript Compiler API to accelerate Angular upgrades via automatic migrations
- Implemented and engineered the UX of Limerence AI chatbot
- Restructured monolithic monorepo into domain-based architecture for team scalability
- Drove technical improvements through written proposals and RFC process
- Collaborated with QA, product managers, and designers to deliver features and resolve cross-functional issues
- Designed and built a Text2SQL harness; SQL parser validation, schema introspection, retry loops, multi-turn conversational memory, streaming with token estimation and context compaction, and tool-calling orchestration — powering the chatbot end-to-end
- Built a domain-knowledge injection layer (terms, hints, guardrails, examples, workflows) to create specialized agents per domain and use case

Senior Software Engineer, Equiti Group – Amman, Jordan

Mar 2019 – Oct 2021

International CFD Forex broker

- Built Front-End CRM from scratch using Angular.
- Contributed to converting monolithic .NetCore project to microservices using Node.js and .Net 5 with gRPC
- Utilized Node.js to send RabbitMQ messages to browser via SSE
- Handled stock data streams using reactive programming (RxJS and Rx.NET)
- Established CI pipelines in Azure DevOps for Angular, Node.js, .NetCore, and Flutter
- Wrote automated tests in JavaScript and C# for product quality and stability

JavaScript Engineer, NoventApp for Business Solutions – Amman, Jordan

Jan 2017 – Mar 2019

- Built food delivery application from scratch using Node.js, TypeScript, and Angular
- Integrated Firebase Realtime-Database for live driver location tracking
- Built PWA features including Add To Home Screen, Push Notifications, and Offline mode
- Implemented policy-based caching in browser to increase data retrieval speed

Languages

Arabic: Native

English: Full Professional Proficiency

Skills

AI/ML: LLM Applications, RAG Systems, Agent Architectures, OpenAI API, Vercel AI SDK

Languages: TypeScript, C# and Dart.

Backend: Node.js, .NetCore, gRPC, Prisma, PostgreSQL.

Frontend: React, Angular, RxJS, PWA, SSR.

Infrastructure: Docker, GCP, Azure DevOps, CI/CD, Firebase.
